

ELK GROVE MILLING, INC.

ESTABLISHED 1982

Elk Grove Milling, Inc. is committed to the manufacturing of safe horse feed and is a medication-free facility. Equine health is the first and foremost priority in any of the manufacturing processes. Medications, including ionophores, are not allowed on-site at any time, and at no point does EGM equipment, trailers, or personnel have contact with any medicated ingredients.

To elaborate further on Elk Grove Milling, Inc.'s feed safety processes, there is a stringent previous haul policy on any of the inbound commodities where equipment must meet the same medication-free standard as any EGM equipment. Trailers and loads are thoroughly vetted through documentation and verification. Established relationships with these trucking companies are utilized, with repeat drivers who know the enforced processes and expectations that comply with and exceed Federal and State food/feed safety standards. Furthermore, EGM's proprietary blend of vitamins and minerals (equine premix) is made on a strictly regulated non-medicated line and is exclusively transported on EGM equipment.

Elk Grove Milling, Inc. participates in frequent third-party audits that follow human-food-grade inspection practices and protocols.
