FEEDING DIRECTIONS:

When fed as the total diet with no other forage, feed at a rate of 1.5-2 lbs per 100 lbs of body weight. When fed in combination with hay, feed at a rate of 0.5 to 1.0 lbs per 100 lbs of body weight a day in addition to 1 to 1.5 % body weight as good quality hay. To receive the full benefit of 2,000 mg of glucosamine and 700 mg of Chondroitin, you must feed at least 6 pounds a day per horse. Horses should always have access to salt and fresh clean water.

WARNING: Feed Stable Mix according to the feeding instructions provided on the feed tag, or upon the advice of your nutritionist. Feeding additional vitamin or mineral supplements is not recommended when feeding Stable Mix according to feeding instructions. Do not add other sources of selenium that cause total dietary selenium (forage and grain, combined) to exceed 0.3 ppm. Chromium from all sources of supplemental chromium cannot exceed 4 milligrams per horse per day. Sport Horse Mix should not be fed to sheep as it may result in copper toxicity.
